TEAM LEAD VERSION (Week-8)

TEAMWORK

CLARUSWAY
WAY TO REINVENT YOURSELF

Meeting Agenda

▶ Icebreaking

▶ Questions

▶ Interview/Certification Questions

▶ Coding Challenge

▶ Video of the Week

▶ Retro Meeting

▶ Case Study/Project

Teamwork Schedule

Ice-breaking 10m

- Personal Questions (Stay at home & Corona, Study Environment, Kids etc.)
- Any challenges (Classes, Coding, AWS, studying, etc.)
- Ask how they're studying, give personal advice.
- Remind that practice makes perfect.

Team work 10m

- Ask what exactly each student does for the team, if they know each other, if they care for each other, if they follow and talk with each other etc.

Ask Questions 15m

1. Which Git command downloads commits, files, and refs from a remote repository into your local repo, but it doesn't integrate any of this new data into your working files?

A. clone
B. pull
C. fetch
D. merge
E. push

Answer: *C*

2. What is AWS' serverless computing service?

A. AWS Serverless
B. AWS CloudFront
C. AWS Lambda
D. AWS API Gateway

Answer: *C*

3. What is the service provided by AWS that allows developers to easily deploy and manage applications on the cloud?

A. Cloudformation
B. Elastic Beanstalk
C. Route 53
D. Container Service

Answer: *B*

4. Using API Gateway, you can create SOAP APIs.

A. True
B. False

Answer: *B*

5. A company requires to deploy an existing Java-based application to AWS. Which of the following should be used to fulfill this requirement in the quickest way possible?

A. Deploy to an S3 bucket and enable website hosting.
B. Use the Elastic Beanstalk service to provision the environment.
C. Use EC2 with Auto Scaling for the environment.
D. Use AMIs to build EC2 instances for deployment

Answer: *B*

AWS Elastic Beanstalk is an easy-to-use service for deploying and scaling web applications and services developed with Java, .NET, PHP, Node.js, Python, Ruby, Go, and Docker on familiar servers such as Apache, Nginx, Passenger, and IIS.*

You can simply upload your code and Elastic Beanstalk will automatically handle the deployment, from capacity provisioning, load balancing, auto-scaling to application health monitoring. At the same time, you retain full control over the AWS resources powering your application and can access the underlying resources at any time.

For more information on the Elastic Beanstalk service, please visit the following Link

Interview/Certification Questions 20m

1. You are planning on deploying a video based application onto the AWS Cloud. These videos will be accessed by users across the world. Which of the below services can help stream the content in an efficient manner to the users across the globe?

A. Amazon Route 53.
B. Amazon Cloudtrail
C. Amazon CloudFront
D. Amazon S3

Answer: *C*

2. Which of the following components of the Cloudfront service can be used to distribute contents to users across the globe?

A. Amazon VPC
B. Amazon Regions
C. Amazon Availability Zones
D. Amazon Edge Locations

Answer: *D*

3. A professional educational institution maintains a dedicated web server and database cluster that hosts an exam results portal for modules undertaken by its students. The resource is idle for most of the learning cycle and becomes excessively busy when exam results are released. How can this architecture be improved to be cost-efficient?

A. Configure AWS elastic load-balancing between the webserver and database cluster
B. Configure RDS multi-availability zone for performance optimisation
C. Configure serverless architecture leveraging AWS Lambda functions
D. Migrate the web servers onto Amazon EC2 Spot Instances

Answer: *C*

4. Which of the following is the customer's responsibility with respect to the AWS Lambda service? (choose 2 options)

A. Lambda function code.
B. Monitoring and logging lambda functions.
C. Security patches.
D. Installing required libraries in underlying compute instances for Lambda execution.
E. Providing access to AWS resources that triggers a Lambda function.

Answer: *A and E*

5. You have built a REST API using API gateway and distributed to your customers. However, your API is receiving large number of requests and overloading your backend system causing performance bottlenecks and eventually causing delays and failures in serving the requests for your important customers. How would you improve the API performance? (Choose 2 options)

A. Enable throttling and control the number of requests per second.
B. Create a resource policy to allow access for specic customers during specic time period.
C. Enable API caching to serve frequently requested data from API cache.
D. Enable load balancer on your backend systems.

Answer: *A and C*

Video of the Week 10m

- AWS Lambda Tutorial

Retro Meeting on a personal and team level 10m

Ask the questions below:

- What went well?
- What could be improved?
- What will we commit to do better in the next week?

Coding Challenge 5m

- Coding Challenge: Find the Non-Repeated Values

Case study/Project 10m

- Project-004 : Phonebook Application (Python Flask) deployed on AWS Application Load Balancer with Auto Scaling and Relational Database Service using AWS Cloudformation

Closing 5m

-Next week’s plan

-QA Session
